

# Proportional directional valves high performance

piloted, with two LVDT transducers and positive spool overlap

## DPZO-L

Proportional directional valves, piloted, with two LVDT position transducers and positive spool overlap for best dynamics in directional controls and not compensated flow regulations.

The valves operate in association with digital off-board drivers, see section [3].

The two LVDT transducers (pilot and main stage) grant very high regulation accuracy and response sensitivity.

With de-energized proportional solenoids, mechanical central position of the spool is performed by centering springs

Spools regulation characteristics:

L = linear

S = progressive for fine low flow control

D and DL = differential, for control of actuators with area ratio 1:2

D9 and L9 = for regenerative circuit

Q5 and V9 = for alternate P/Q control

Size: 10 ÷ 32 - ISO 4401

Max flow: 180 ÷ 1600 l/min

Max pressure: 350 bar

#### Note:

Hydraulic configuration vs. reference signal (standard and option /B)

Reference signal  $\left. \begin{array}{l} 0 \div +10 \text{ V} \\ 12 \div 20 \text{ mA} \end{array} \right\} \text{P} \rightarrow \text{A} / \text{B} \rightarrow \text{T}$

Reference signal  $\left. \begin{array}{l} 0 \div -10 \text{ V} \\ 12 \div 4 \text{ mA} \end{array} \right\} \text{P} \rightarrow \text{B} / \text{A} \rightarrow \text{T}$

**23** = differential - regenerative spool **D9**  
(not available for valve size 32 and 35)

D9 spool type with a fourth position specific to regenerative circuit, performed by means of an additional external check valve.

**24** = linear - internal regenerative spool **L9**  
(available only for valve size 16)

L9 spool type with a fourth position specific to perform a regenerative circuit internal to the valve.

**25** = linear spool **Q5**  
(not available for valve size 32 and 35)

Q5 spool type is specific for alternate P/Q controls in combination with /S\* option of digital integral drivers, (see tech. table **FS500**).

It allows to control the pressure in A port or B port and it provides a safety central position (A-T/B-T) to depressurize the actuator chambers.

The strong meter-in characteristic makes the spool suitable for both pressure control and motion regulations in several applications.

**26** = differential - progressive spool **V9**

V9 spool type is specific for alternate P/Q controls in combination with S\* option of digital integral drivers (see tech table **FS500**).

This spool is specially designed to manage the whole injection cycle in plastic machinery, thanks to the following specific features:

- strong meter-in characteristic to allow the pressure control in A port during the holding pressure (P-A) and the plasticizing (A-T) phases
- safety central position (A-T/B-T) to depressurize the actuator chambers
- large A-T and B-T flow capability, required during the plasticizing phase, to discharge big volumes from high differential injection cylinders with low pressure drops and permitting the contemporary oil suction from tank

## 8.3 Response time

The response times in below diagrams are measured at different steps of the reference input signal. They have to be considered as average values. For the valves with digital electronics the dynamics performances can be optimized by setting the internal software parameters.

## 9 HYDRAULIC OPTIONS

**B** = Solenoid and LVDT transducer at side of port B of the main stage (side A of pilot valve). For hydraulic configuration vs reference signal, see 8.1

**D** = Internal drain (through port T).

Pilot and drain configuration can be modified as shown in the functional scheme here aside. For detailed view of plugs position, see section 12

The valve's standard configuration provides internal pilot and external drain.

**E** = External pilot (through port X).

Pilot and drain configuration can be modified as shown in the functional scheme here aside. For detailed view of plugs position, see section 12

The valve's standard configuration provides internal pilot and external drain.

**G** = Pressure reducing valve ③ with fixed setting, installed between pilot valve and main body. Reduced pressure setting:

DPZO-1, DPZO-2, DPZO-4(M) and DPZO-6 = **40 bar**

It is advisable for valves with internal pilot in case of system pressure higher than 150 bar.

Pressure reducing valve ③ is standard for DPZO-1, for other sizes add /G option.

Functional Scheme - example of configuration 71

- ① Pilot valve
- ② Main stage
- ③ Pressure reducing valve
- ④ Plug to be added for external pilot through port X
- ⑤ Plug to be removed for internal drain through port T
