

## **MOUNTING INTERFACE**

 $\ensuremath{\textbf{NOTE}}$  : Ports P and T must never be made. Conversion plates are available.

### PERFORMANCES

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

(			
Maximum operating pressure Minimum ∆p between A and B port	bar	250 10	
Maximum controlled flow Min. controlled flow (for 1 and 4 l/min. reg.) Maximum free-reverse flow	l/min	1,5 - 4 - 8 - 16 - 25 0,025 40	
Step response	see point 7		
Hysteresis (with PWM 100 Hz)	% of p nom	< 6%	
Repeatability	% of p nom	< ±2,5%	
Electrical characteristic	see point 6		
Ambient temperature range	°C	-20 / +50	
Fluid temperature range	°C	-20 / +80	
Fluid viscosity range	cSt	10 ÷ 400	
Fluid contamination degree	According to ISO 4406:1999 class 18/16/13 (class 17/15/12 for flows < 0,5 l/min)		
Recommended viscosity	cSt	25	
Mass	kg	1,9	

RPCED1 PROPORTIONAL FLOW CONTROL VALVE DIRECT OPERATED

**SERIES 54** 

# SUBPLATE MOUNTING ISO 6263-03

p max 250 bar

**Q** max (see table of performances)

## **OPERATING PRINCIPLE**

## HYDRAULIC SYMBOLS

82 200/121 ED

#### **1 - IDENTIFICATION CODE**

**NOTE:** The standard valve is supplied with surface treatment of phosphating black. The zinc-nickel finishing on the valve body makes the valve suitable to ensure a salt spray resistance up to 240 hours. (test operated according to UNI EN ISO 9227 standards and test evaluation operated according to UNI EN ISO 10289 standards).

## 2 - CHARACTERISTIC CURVES

(measured with viscosity of 36 cSt at 50  $^{\circ}\text{C})$ 

Typical curves for flow rate  $A \rightarrow B$  according to the current supplied to the solenoid for controlled flow rate of: 1- 4 - 8 - 16 - 25 l/min.

## **3 - PRESSURE COMPENSATION**

Two throttles in series are in the valve. The first is controlled by the proportional solenoid; the second throttle assures a constant pressure drop, controlled by the pressure upstream and downstream the first throttle.

In these conditions, the set flow rate value stays constant within a tolerance range of  $\pm 2\%$  of the full scale flow rate for maximum pressure variation between the value inlet and outlet ports.

## **4 - THERMAL COMPENSATION**

Thermal compensation of the valve is obtained by adopting the principle of restricted fluid passage, so that the fluid is not influenced significantly by variations in oil viscosity.

For controlled flow rates of lower than 0.5 l/min and with a temperature change of 30°C, flow rate varies by 13% of the set value approximatively. For higher flow rates at the same temperature change the flow rate variation is <4% of the set flow rate.

#### **5 - HYDRAULIC FLUIDS**

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

#### **6 - ELECTRICAL CHARACTERISTICS**

#### **Proportional solenoid**

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube, secured by means of a lock nut and can be rotated through  $360^\circ$  depending on installation clearances.

NOMINAL VOLTAGE	V DC	24
RESISTANCE (AT 20°C)	Ω	17.6
MAXIMUM CURRENT	A	0.86
DUTY CYCLE		100%
ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU	
CLASS OF PROTECTION Atmospheric agents (IEC EN 60529)	IP65	

#### 7 - STEP RESPONSE

(obtained with mineral oil with viscosity of 36 cSt at 50°C and electronic control card)

Step response is the time taken for the valve to reach 90% of the set pressure value following a step change of reference signal.

The table illustrates typical response times with valve flow rate of 16 l/min and with input pressure of 100 bar.

### 8 - INSTALLATION

RPCED1 valves can be installed in any position without impairing correct operation.

Ensure that there is no air in the hydraulic circuit.

Valves are fixed by means of screws or tie rods on a flat surface with planarity and roughness equal to or better than those indicated in the relative symbols. If minimum values are not observed fluid can easily leak between the valve and support surface.

REFERENCE SIGNAL STEP	0 → 100%	100 → 0%	25→75%	75→25%
Step response [ms]	60	80	50	70

RPCED1 SERIES 54

## 9 - OVERALL AND MOUNTING DIMENSIONS

## **10 - ELECTRONIC CONTROL UNITS**

EDC-111	for solenoid 24V DC	plug version	see cat. 89 120
EDM-M111	for solenoid	DIN EN 50022	see cat.
	24V DC	rail mounting	89 251

### **11 - SUBPLATES**

(see cat. 51 000)

rear ports 3/8" BSP	side ports 3/8" BSP	ISO 6263 subplate with P e T blind ports
PMRPC1-AI3G	PMRPC1-AL3G	code 0113388 P port to be plug (M4)
