Custom alarm and saturation signal levels	
All categories must be completed for custom configuration.	
Requires option C6 or C7	
Low alarm ⁽¹⁾ : ≤ _____ mA (must be between 3.8 and 3.6)	High alarm ⁽²⁾ : ≥ _____ mA (must be between 20.2 and 23.0)
Low saturation: _____ mA (must be between 3.9 and 3.7)	High saturation: _____ mA (must be between 20.1 and 21.5)
For reference only:	
Alarm values: Values (mA) the transmitter outputs if it detects a gross malfunction condition.	
Saturation values: Values (mA) the transmitter outputs if applied pressure goes outside the 4–20 mA range values.	

1. Low alarm must be 0.1 mA lower than the low saturation value.
2. High alarm must be at least 0.1 mA higher than the high saturation value.

Scaled variable information

High scaled value = _____ (Scaled units)	High scaled value = _____ (Scaled units)
Linear offset = _____ (Eng. units)	Low Flow Cut Off: <input type="radio"/> On <input type="radio"/> Off* _____ (Scaled units)
Range values — both categories must be completed. (used when scaled variable is set to primary variable)	
LRV = _____ (Scaled unit) (7 characters max)	URV = _____ (Scaled unit) (7 characters max)

Process alert setpoints	
Process alert setpoints are values set by the user where the transmitter outputs a HART message and digital display information when the applied pressure or temperature goes outside the designated range. The pressure values are limited to the range of the transmitter.	
Pressure process alert (HART signal only)	Temperature process alert (HART signal only)

1. Available with measurement type 7 only.

Self-organizing network parameters⁽¹⁾

Emerson™ Smart Wireless self-organizing devices employ configurable network parameters that allow users to manage network security. The best security practice is to order self-organizing devices with generated network parameters and enter *Customer Network Parameters* during the onsite commissioning process upon receipt. This allows customers to best control network access and security.
